

**Position:**

Full Stack Engineer

**Company:**

PointPredictive is a fast-growing technology start-up that leverages a patented combination of artificial and natural intelligence [Ai+Ni] to provide risk assessments in the auto lending, mortgage, and retail space. The platform has been proven to reduce lender loan losses by 40-60% with review rates of 5-10% of their applications, resulting in higher productivity of lender risk management departments, significantly lower losses to their bottom lines, and improved customer experience. The company was founded in 2013 by a seasoned team of technology entrepreneurs with over 20 years of experience in the startup space (including several acquisitions), and has financial backing from top tier investors.

**Role:**

The company is looking for an outstanding full stack engineer who would be responsible for building and deploying front end web applications and backend systems to support them. Core skills include React and Python software development and experience with Amazon Web Services.

**Responsibilities:**

The full stack engineer job responsibilities include (but are not limited to):

- Developing customer facing websites to support our product needs.
- Build internal facing websites to support other teams and tooling.
- Create APIs to support communication between our backend systems and our sites.
- Developing automated code tests
- Maintaining company web applications
- Developing new extract-transform-load (ETL) processes
- Building internal software tools to assist processes and information flow for teams across the company.

**Requirements:**

- 1-3 years of experience coding in React
- 2-5 years of experience coding in Python
- 1-3 years of experience building and deploying infrastructure in AWS
- 1-3 years of experience working in a fast-paced start-up environment
- Experience working in a FinTech company is a plus
